Our solution formula

$$\frac{d - \sqrt{d^2 - 4ac}}{2a} \pm \frac{d + \sqrt{d^2 - 4ac}}{2a} = \frac{d}{2a} \pm \sqrt{\frac{d^2 - 4ac}{4a^2}}$$

A common sense approach to software solutions

Start with standards

We approach the Software Development Life Cycle (SDLC) with client tools and methodology standards. Then we incorporate relevant industry standards into the process.

Add years of experience

We supplement this with our years of experience. We have been in business since 1999, and our senior consultants have been implementing solutions since 1986!

Tailor to business problem

While the methodology concepts are the same, the implementation requirements differ for each client. We analyze the business problem, assess the client's working environment and then we collaborate with the stakeholders to determine the appropriate solution methodology.

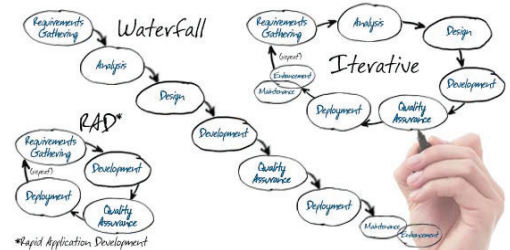

Repeat as necessary

One of CloverLeaf's founding principles is iteration. We take a problem, break it into smaller pieces. This "lightweight" approach has come to be known as the *Agile* methodology.
